A2 GCE HUMAN BIOLOGY

F224/01 Energy, Reproduction and Populations

Candidates answer on the Question Paper.

OCR supplied materials:
Insert (inserted)

Other materials required:

- Electronic calculator
- Ruler (cm/mm)

Duration: 1 hour 15 minutes

Candidate forename		Candidate surname	
-----------------------	--	----------------------	--

Centre number						Candidate number				
---------------	--	--	--	--	--	------------------	--	--	--	--

INSTRUCTIONS TO CANDIDATES

- The Insert will be found inside this document.
- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer **all** the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. If additional space is required, you should use the lined pages at the end of this booklet. The question number(s) must be clearly shown.
- Do **not** write in the bar codes.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is **60**.

Where you see this icon you will be awarded marks for the quality of written communication in your answer.

- You may use an electronic calculator.
- You are advised to show **all** the steps in any calculations.
- This document consists of **20** pages. Any blank pages are indicated.

BLANK PAGE

PLEASE DO NOT WRITE ON THIS PAGE

Answer **all** the questions.

1 Some couples are unable to conceive naturally. The Human Fertilisation and Embryo Authority (**HFEA**) regulates the use of fertility treatment and other assisted conception procedures that are carried out in the UK.

- A possible cause of male infertility may be anatomical abnormalities of the male reproductive system.
- One procedure that has been developed in recent years is Surgical Sperm Removal (**SSR**).
- In this procedure, microsurgery is carried out under local anaesthetic and a fluid containing sperm is collected directly from the epididymis.

(a) (i) Name the structure through which sperm normally leave the epididymis.

..... [1]

(ii) Suggest why the concentration of sperm in the fluid collected from the epididymis will be greater than that in semen.

.....
.....
.....
..... [2]

(b) Sperm that has been collected using SSR may be used in **IVF** treatment or in **ICSI**.

(i) State what the initials IVF and ICSI represent.

IVF
ICSI [1]

(ii) More embryos result from the use of SSR-collected sperm in ICSI than from the use of SSR-collected sperm in IVF treatment.

Suggest why.

.....
.....
..... [1]

- (c) The successful outcome of fertility treatment is pregnancy. If a woman suspects that she may be pregnant, a pregnancy test stick may be used to confirm the pregnancy.

The test stick contains free molecules of an antibody attached to coloured beads containing a dye. The antibodies are specific to the hormone Human Chorionic Gonadotrophin (**HCG**), which is produced during pregnancy.

- (i) State the region of the antibody molecule that is attached to the coloured bead **and** state the region that will bind to HCG.

Region attached to coloured bead

Region that will bind to HCG

[1]

- (ii) Fig. 1.1 shows a pregnancy test stick and four possible results, **W**, **X**, **Y** and **Z**, that could appear in the oval result window.

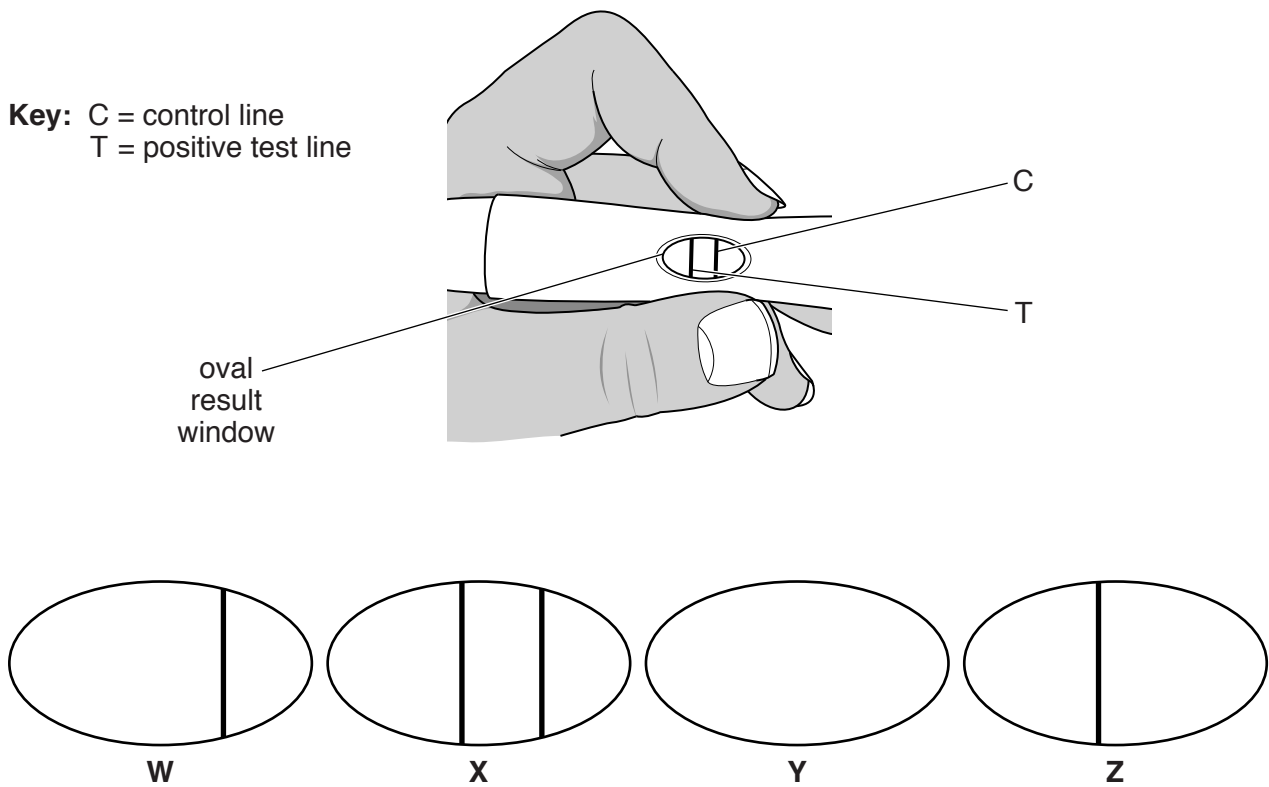

Fig. 1.1

Complete the table below to indicate which conclusions can be drawn from the results shown in windows **W** to **Z** in Fig. 1.1.

Choose from the following:

- pregnant
- not pregnant
- result not valid.

Result window	Conclusion
W
X
Y
Z

[2]

[Total: 8]

2 After the London 2012 Olympic Games, a 'blog' on the UK's Department of Health website stated:

'we must deliver on our promise to create a sustainable and long term health legacy and encourage the nation to get more active, not just in the next few months but for years to come'

(14th August 2012)

(a) There are health benefits associated with taking regular exercise.

One benefit of long term exercise is a decrease in blood cholesterol level.

(i) Why does a reduction in blood cholesterol levels benefit the cardiovascular system?

.....
.....
.....
.....
..... [2]

(ii) State **one** benefit of exercise on the **skeletal** system.

.....
..... [1]

(b) The ability of the body to take in, transport and use oxygen is known as the VO_2 max.

- One consequence of taking regular aerobic exercise is that the VO_2 max increases.
- Some athletes use illegal methods such as taking recombinant erythropoietin to increase their VO_2 max.

(i) State the organelle where aerobic respiration takes place **and** the stage of aerobic respiration that requires oxygen.

Organelle

Stage of aerobic respiration

..... [2]

(ii) Explain why the use of recombinant erythropoietin increases the VO_2 max.

.....
.....
.....
.....
..... [2]

(c) To improve aerobic fitness, exercise must be taken regularly. Both the frequency and duration of each exercise session will affect the rate of improvement in fitness.

Two studies on aerobic fitness were carried out over a period of 20 weeks. One study varied the frequency of the exercise sessions. The other study varied the duration of the exercise sessions.

Both studies contained three groups of subjects that exercised and one group that did not exercise.

In the **frequency** study, the subjects that exercised:

- exercised for 1, 3 or 5 days each week
- exercised for 30 minutes each session.

In the **duration** study, the subjects that exercised:

- exercised for 3 days each week
- exercised for 15, 30 or 45 minutes each session.

In both studies, an initial fitness assessment was carried out.

(i) Identify **one** variable that would need to be controlled in **both** studies in order to make a valid comparison of the effect of frequency of exercise and duration of exercise on fitness.

.....
..... [1]

Question 2(c)(ii) begins on page 8

Both studies contained three groups of subjects that exercised and one group that did not exercise.

In the **frequency** study, the subjects that exercised:

- exercised for 1, 3 or 5 days each week
- exercised for 30 minutes each session.

In the **duration** study, the subjects that exercised:

- exercised for 3 days each week
- exercised for 15, 30 or 45 minutes each session.

Fig. 2.1 is a graph of the results obtained from the studies.

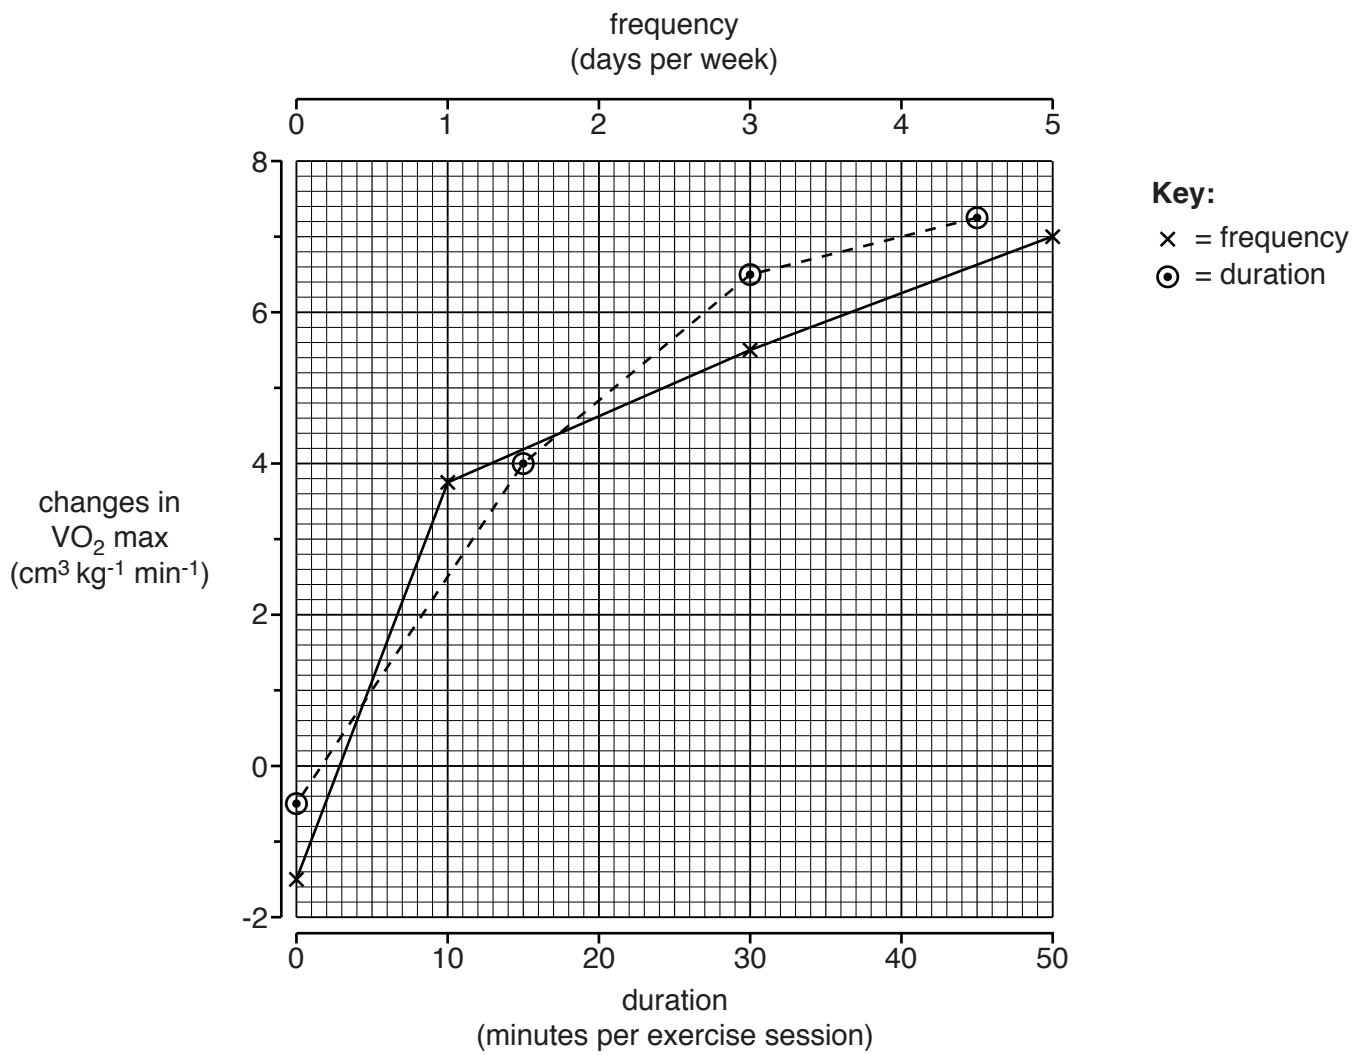

Fig. 2.1

- (ii) Using Fig. 2.1, calculate the percentage increase in VO_2 max that can be achieved by doubling the duration of the exercise session from 15 to 30 minutes.

Show your working.

Answer = % [2]

- (iii) A fitness trainer said, “You can still keep improving if you miss a session – just do a longer session next time”.

Using data from Fig. 2.1, what **evidence** is there to support this statement?

.....

Question 3 begins on page 10

3 *Spirulina* are photosynthetic bacteria belonging to a group known as the Cyanobacteria. Unlike other Cyanobacteria, *Spirulina* do not fix nitrogen.

(a) Name **one** species of bacterium that **can** fix nitrogen.

..... [1]

(b) *Spirulina* are widely grown in some parts of the world for use as food for humans and animals.

Fig. 3.1, on page 4 of the insert, shows the green bacterial ‘mats’ being harvested. Once harvested these are dried and processed.

Spirulina is also sold in the United Kingdom as a dietary supplement in the form of capsules, tablets or powder.

Fig. 3.2 below is an extract from a leaflet promoting the benefits of *Spirulina* as a dietary supplement.

- *Spirulina* is one of the most concentrated and nutritious food sources in nature.
- *Spirulina* contains all the amino acids.
- *Spirulina* is a rich source of many vitamins such as B3 (nicotinamide), B9 (folate), C and D.
- *Spirulina* is rich in all essential minerals.
- *Spirulina* is rich in essential fatty acids.
- *Spirulina* is a good source of antioxidants.

Fig. 3.2

Using the information given in Fig. 3.2 about the substances found in *Spirulina*:

(i) identify **one** substance which is necessary for the synthesis of haemoglobin;

..... [1]

(ii) identify **one** substance which forms part of a respiratory co-enzyme;

..... [1]

(iii) identify **one** substance which may prevent DNA damage;

..... [1]

(iv) identify **one** substance which is recommended in routine pre-conceptual care.

..... [1]

(d) Dried *Spirulina* can be eaten directly by humans or fed to cattle.

Fig. 3.3 shows a food chain involving *Spirulina*.

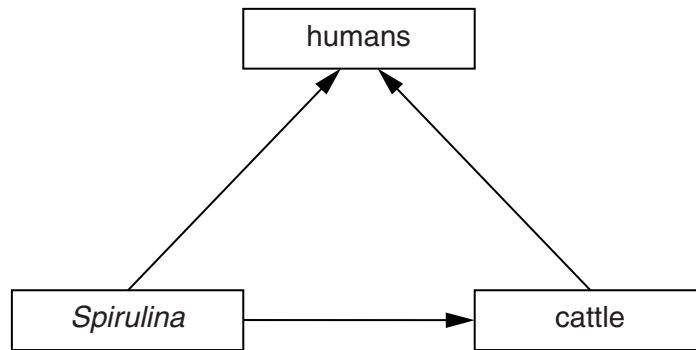

Fig. 3.3

State **and** explain the advantage to human populations of eating dried *Spirulina* directly rather than using it as cattle feed.

.....

.....

.....

.....

.....

.....

..... [2]

[Total: 12]

4 The growth of a human being from a zygote into a sexually mature adult involves many cycles of cell division by both mitosis and meiosis.

Once formed, cells may differentiate. Some cells will group and become part of a tissue or an organ. Other cells, such as gametes, remain as individual single cells.

(a) The following cells, **J**, **K**, **L** and **M**, are found in either the human male or human female:

- J** oogonium
- K** primary spermatocyte
- L** secondary oocyte
- M** Sertoli cell.

State the cell **or** cells from the list above that fit the following descriptions:

(i) diploid cells

..... [1]

(ii) an embryonic diploid cell

..... [1]

(iii) a cell formed by meiosis I.

..... [1]

(b) In the menstrual cycle, the activity of the reproductive organs is controlled by hormones. Some of these hormones, such as oestrogen, are steroid hormones. Others, such as follicle stimulating hormone (**FSH**) and luteinising hormone (**LH**), are glycoproteins.

Oestrogen, FSH and LH molecules carry out their function by binding to receptors.

- Oestrogen receptors are found in the cytoplasm of target cells.
- FSH and LH receptors are found on the cell surface membranes of target cells.

(i) Suggest why receptors for FSH and LH are located on the cell surface membranes but the receptors for oestrogen are located in the cytoplasm.

.....

 [2]

(ii) Name the organ responsible for the secretion of FSH and LH.

..... [1]

(c) Fig. 4.1 shows a simplified diagram of the action of the hormone oestrogen on a target cell.

Key:

- oestrogen molecule
 ◩ oestrogen receptor

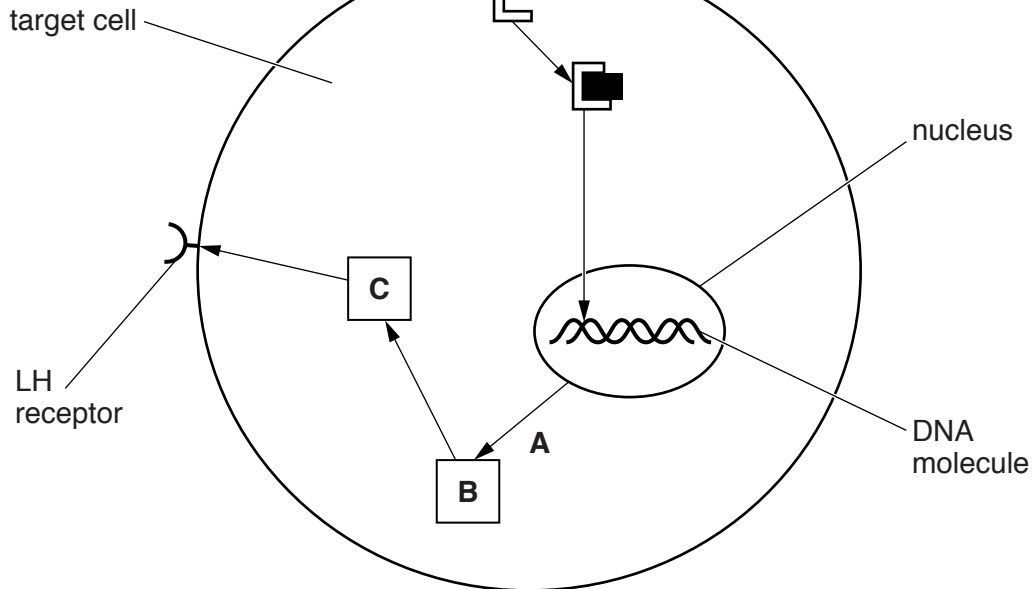

Fig. 4.1

(i) Complete the table below by naming the following molecules and organelles represented in Fig. 4.1.

	Name
Molecule A	
Organelle B	
Organelle C	

[3]

(ii) Suggest the location **and** the role of the target cell shown in Fig. 4.1.

.....

.....

.....

.....

.....

.....

.....

.....

[2]

- (d) Cells in the endometrium (the lining of the uterus) have receptors for follicle stimulating hormone (FSH).

Suggest what effect FSH has on the DNA in the nuclei of cells in the endometrium during days 5 to 14 of the menstrual cycle.

Give the reason for your suggestion.

.....

.....

.....

.....

..... [2]

[Total: 13]

Question 5 begins on page 16

5 The Office for National Statistics (ONS) analyses the data collected from the National Census.

Information required on the census form includes age, place of residence and the numbers of people in any household.

Using this information **and** data from the registration of births and deaths, detailed and accurate information on population size in England and Wales can be produced.

(a) Suggest why the information collected by the ONS is accurate.

.....
.....
..... [1]

(b) The National Census is carried out every 10 years and the data can be analysed to compare changes in the size and composition of the UK population over time.

Fig. 5.1, **on page 2 of the insert**, shows the structure of the population of England and Wales in **2001**.

The **1960s** was a period which experienced a ‘baby boom’ when the birth rate increased significantly.

Describe the evidence from Fig. 5.1 that shows that this decade experienced a ‘baby boom’.

.....
.....
.....
.....
.....
..... [2]

(c) The number of births each year depends on **two** factors. One of these factors is the fertility rate of the female population. The fertility rate is measured by the mean number of children born to a woman over her lifetime.

(i) Suggest the second factor which will affect the number of births each year in a population.

.....
.....
..... [1]

- (ii)
- In 1911 the fertility rate was 2.8 and the population size was 36.1 million.
 - In 2001 the fertility rate was 1.6 and the population size was 52.0 million.

Outline why the population increased in size dramatically despite a fall in the fertility rate.

.....
.....
.....
.....
.....
.....
..... [2]

(d) Fig. 5.2, on page 3 of the insert, shows the population graph produced from the census data in 2011.

(i) Suggest why there is a significant increase in the population of 20 to 29 year olds on the 2011 graph compared with that of the 10 to 19 year olds on the 2001 graph.

.....
..... [1]

(ii) Comparing the data from 2001 with the data from 2011, identify **one** effect that the increasing number of 20 to 29 year olds may have had on the size of any other age group **and** explain why this might have occurred.

Effect

Turn over

6 In recent years, the organisers of the Campaign for Real Ale (CAMRA) have reported a large increase in the number of 'microbreweries'. These are small scale beer producers who concentrate on the taste and quality of the beer they produce. Beer-making requires yeast cells to respire the sugars found in an extract made from germinated barley grains.

(a) Yeast cells carry out both aerobic and anaerobic respiration.

(i) Identify one product of **both** aerobic and anaerobic respiration in yeast cells that is essential in beer production.

..... [1]

(ii) Identify one product of anaerobic respiration in yeast cells that is **not** produced in aerobic respiration.

..... [1]

(b) Both aerobic and anaerobic respiratory pathways begin in the cytoplasm.

In the cytoplasm, hexose sugars are broken down in a series of steps to form a three-carbon compound. This compound is then metabolised further to allow cells to make some ATP.

(i) Outline how ATP is made **in the cytoplasm** of yeast and human cells from the metabolism of a three-carbon compound.

In your answer, you should use appropriate technical terms, spelled correctly.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
..... [3]

(ii) State **one** anabolic process that occurs **in the nucleus** of both human and yeast cells for which ATP is required.

..... [1]

[Total: 6]

END OF QUESTION PAPER

ADDITIONAL ANSWER SPACE

If additional answer space is required, you should use the following lined page(s). The question number(s) must be clearly shown in the margins.

This section of the page is a large, empty area of lined paper. It features a vertical solid line on the left side, creating a margin. The rest of the page is filled with horizontal dotted lines, providing space for writing answers. The lines are evenly spaced and extend across the width of the page.

A large area of the page is reserved for writing, featuring a solid vertical line on the left side and horizontal dotted lines extending across the page.
